THE OYEN NEWS

J. W. Robinson Heads Board of Trade

Mr. J. W. Robinson was elected president of the Oyen Board of Trade, at the annual meeting held on Monday evening. Mr. W. S. Marshall was elected vice-president and Mr. V. E. French, secretary-treasurer. Meetings will be held from time to time at the call of the president.

A hearty vote of thanks was tendered to the retiring officers for services rendered.

It was decided to hold the annual sports day this year as usual, and the first Wednesday in July was decided upon (July 5).

District is Getting Adequate Moisture

An estimate of the snowfall during March and early April places the precipitation at 75 inch. Rainfalls in April amounted to .74 inch, and the precipitation for the month of May to date totals .76 inch. Last year the April precipitation was 1.52 inch and in May up to and including the nineteenth day .84 inch.

A change in the weather occurred yesterday, when the temperature dropped to 37. To day, the thermometer is registering around the 40 mark and a light rain is falling.

Brooding and Rearing

Turkeys Artificially

At this season of the year many farmers are wondering how to raise their turkeys. They have plenty of turkey eggs on hand and no broody hens with which to incubate them. It is not uncommon for large numbers of eggs to be wasted waiting for chicken hens or turkey hens to go broody. Artificial incubation and brooding are entirely satisfactory states the provincial poultry commissioner and in the end usually insure more turkeys being raised than if done in the natural way. It is true that in incubators one does not get as large a percentage of poult, but brooding artificially seems to give better satisfaction, with less loss and quicker growth than when the poult are brooded with hens. For incubation a temperature about one degree less than for chicken eggs gives good results, with the moisture slightly increased. As soon as the hatch comes off, and the

Record Telephone Call

The record long distance phone call for Alberta was effected from Edmonton by the government telephone system recently, when an Edmonton man talked to Cairo, Egypt, a distance of nearly 10,000 miles.

Settlement Celebrates Thirtieth Anniversary

The famous Bar Colony of the Lloydminster district celebrates its 30th anniversary this year. The colony originally consisted of 2,000 Britisheers who came out and located on homestead lands in the district now confining upon the town of Lloydminster, and known as one of the best farming districts in the west. The colonists had to trek the distance over land from Saskatoon to their locations.

Road Restrictions Are Cancelled

All special restriction of bus and truck traffic placed on certain of the main highways during the heavy spring run off, have now been withdrawn, and all highways are now open to traffic of all classes subject only to the usual regulations.

Homestead Entries

The provincial lands department during the first quarter of 1933, issued 534 homestead entries, there being 156 in January, 187 in February and 191 in March. In the financial year ending March 31, 1933, there were 3,499 entries in all. The entries for April were 150, of which 28 were granted to women.

birds are thoroughly dry, the young poult should be removed to a colony brooder, or where battery brooders are available, into the battery brooder. As most turkeys are hatched in May and June, an oil burning colony brooder will usually provide sufficient heat and is easily controlled on warm days than a coal burning brooder, although either will give good results.

The International Way

The more extensively a person reads apparently authoritative articles and books dealing with present day economics; the more intensively he studies, investigates, and seriously ponders over political, economic and social problems with an open and discerning mind, the more such a person becomes convinced there is, after all, only one way by which solutions for existing problems and difficulties can be reached—and that is the international way.

Consider the Canadian position as an example, and the situation in this country is in most respects similar to that existing in other countries throughout the world.

This Dominion is a land of great natural wealth; its people are intelligent, progressive, and anxious and willing to work. They have enjoyed a high standard of living in the past, and desire it to continue. They possess political and religious freedom, and have inaugurated and maintained social services for the benefit, not only of individuals but for whole communities and the nation.

Nevertheless, at the moment, the development of natural resources of Canada, our great reservoirs of potential wealth, is at a standstill, while hundreds of thousands of men and women remain unemployed and approximately one and a half million of the population are subsisting on relief provided by the State. The standard of living is falling; not rising; social services are being abolished or curtailed; the burden of public debt is growing every day; and heavier and ever heavier taxes are being imposed.

What is wrong? Is Canada, and the Canadian people, alone to blame? Are they even chiefly to blame? Are our public men in Governments, Parliaments, Legislatures, Municipal Councils, our bankers and financiers; our captains of industry and transportation; our leading economists and business men and agriculturists; our leaders in church and education—are these chiefly responsible? Is it the system in vogue in Canada under which all our life activities and institutions have been operated and governed in the past, the system which great progress was made, responsible for the present breakdown?

Some short-sighted people will thoughtlessly say "Yes," and will try to convince others that the whole trouble lies in the system and that Canadians and if they will, can solve their own problems by their own action; that all they have to do is to change the present system, and create a new one based on an entirely different set of principles. And the same thing is being said in other countries.

This, however, is a superficial view. Suppose Canada could tomorrow create within its own borders an absolutely ideal 100% perfect monetary, banking and credit system while other nations adhered to their present system and methods, would that solve Canada's problems? Intelligent men and women realize it could not.

Suppose Canada tomorrow adopted absolute free trade with the world in an endeavor to again revive the exchange of commodities and once again set in motion all the great activities bound up in trade and commerce, while other nations adhered to their present policies, would that put Canada's unemployed to work and revive Canada's Agriculture? Again, the answer is most decidedly "No."

The solution for our present economic problems is not to be found in a complete change in the system now prevailing in Canada, and that again merely result in still greater unemployment, in confusion, ending in chaos, and more widespread loss and suffering—but it is to be found in international action. It is only so it can be found.

But what Canada and the Canadian people can do, and ought to do, and, we believe, are striving to do, is to encourage such international action, and to create those conditions and ideas in the minds of the people of other nations that will make such international co-operation and action possible. This Dominion can show to the whole world that it is ready and eager to join hands with any other nation, or any group of nations, in the task of breaking down narrow nationalistic ideas, suspicions and fears. Every opportunity this presents itself—and where they do not present themselves Canada should make them—no matter how small it may be, should be quickly grasped, and Canada should indicate, without reserve, that it is prepared to go a long way in the direction of meeting other nations and peoples in providing needed solutions for existing problems.

Organized labor had the germ of the right idea in its international labor brotherhoods organized for mutual protection, but, unfortunately, even within those brotherhoods a selfish nationalism existed, with the result that organized labor in one country proceeded to support selfish trade policies designed to protect themselves but to do injury to their fellow workers in another country. The folly of this has been brought home to them in these years of depression, just as it has been brought home to the bankers and great world traders in all countries. Narrow nationalism simply won't work. That is what is fundamentally wrong with the prevailing system,—the attempt of each nation to shut itself up in a watertight compartment away from all other nations, and in so doing is slowly but surely starving itself to death.

The tearing down that is necessary, is the tearing down of the whole network of wire entanglements and barriers of one kind and another that the nations have erected against each other; the destruction that is called for is the destruction of the narrow nationalistic ideas and fears of people. Let the nations get off the by-paths of narrow nationalism and on to the broad international highways of the world. The depression will pass like a mist before the rising sun; unemployment will give place to industry and busy activity everywhere with the workers of one nation not begrudging work to other nations provided they are busily at work themselves, as they would be; and the primary producers on farms, in forests and fisheries will again enjoy adequate markets and remunerative prices for the things they produce.

The international way is the world's highway; the international method is the Twentieth Century Method.

The United States is the largest consumer of asbestos in the world.

Japan has an extensive back-to-the-ely movement.

England has 3,000,000 dogs, according to a recent census.

Australia has banned all cure-for-baldness advertising.

Pains Around Her Heart

Tired Out After Being Housework

"Last night I had bad pains around my heart, and each morning, after getting up, I seemed to get dizzy and feel tired out."

Knowing that Milburn's Heart and Nerve Pills were good for those troubles I sent for a box and after taking the pills for a few days I felt much better. Since then I have had no return of the dizzy spells and pains around the heart.

Needle and Pin Industry

Little English Town Supplies Practically All World Requirements

At a recent banquet of the Needle-makers' Company the Master stated that after their Great Britain manufacture 750,000,000 needles. Most of them were made at Redditch, in Worcestershire. Nearly all the needles, all the pins and all the fish-hooks in the world are made at Redditch. Nearly everybody in Redditch is employed making needles, pins and fish-hooks, and their ancestors have done so for hundreds of years. The Redditch factories are the most efficient in the world and are in an impregnable position.

If they turn out 750,000,000 needles a year, that means that in two and one-half years they make enough needles to give one to every human being on earth. Query: where do the billions of discarded needles go? The deposit of safety razor blades is an awkward problem. What about needles and pins? They must be put somewhere, and there would be no demand for hundreds of millions of new ones each year. In fifty years Redditch must produce enough needles and pins to give one to every human being. Yet one scarcely ever sees a needle or a pin lying around. In a fat pin seems to be the most common of imaginable things when it is badly wanted.

Needles, pins and fish hooks are just one branch of many products that Great Britain stands supreme in. There are hundreds of others.—St. Thomas Times-Journal.

Worked For Progression

Mrs. Mary Ellen Smith Was One Of Canada's Outstanding Women

Usefulness—is the term, and with an emphatic ring to it, to be applied in contemplating the career of Mrs. Mary Ellen Smith, who died last week at Vancouver at the age of 72 years. Mrs. Smith, the first woman Cabinet Minister in Canada, was a member of the B.C. Legislature, was elected to her adopted province and to the House of Commons in 1917, after a period of many years. Her interests, her contacts, were many, but every one of them counted for something. Mrs. Smith was a worker for the good and the progressive in life. She was a pioneer in the woman's suffrage movement in Canada, and she was one of the champions of the cause of women and children, with minimum wage legislation, better working conditions in factory and the shop and in many kindred matters. Educational movements, patriotic movements, whatever applied reform and a forward look, immediately and enthusiastically invited her attention.

Mrs. Mary Ellen Smith, whose husband, before her, left his mark upon Canadian life as a member of the House of Commons and as a Minister of Finance in British Columbia, was one of Canada's outstanding women.—Regina (Evening) Leader-Post.

Seal Herd Goes North

Escorted By Canadian And U.S. Vessels To Prevent Poaching

On their way north to breeding grounds on the Pribilof Islands, Alaska, huge herds of approximately 1,500 fur seals have been sighted off the Washington coast. They are followed to the international line by United States patrol cruisers and at the point Canadian vessels take over the assignment. At the Alaska line the Canadian vessels withdraw and the United States cutters resume the journey.

The object of the escort is to prevent poaching. Under the terms of the sealing treaty of 1911, all hunting of fur seals is forbidden except by Canadians, in canoes, and armed only with spears, bows and arrows or harpoons. Power boats and guns are banned.

Too Much Work

Unique postman in Estor, Saghalien, Japan, whose route was over the roof, saved up the letters for three years with the intention of delivering all the letters on one trip. When he had collected 4,000 letters he was still tired and burned the lot.

Academy Rejects Painting

The painting by Mary Symons, entitled "The Last Supper," and depicting Christ and His apostles in lounge suits, collars and cravats, seated at a table, was told, has been rejected by the Royal Academy of Britain.

A Valuable Penknife

The largest penknife in the world is now on show in London. It was made in 1851, and has 1,851 blades, each of which can be opened. Each blade is a perfect penknife. The knife weighs over three stones. An offer of \$7,500 for it has been refused.

New Fire Fighting Inventions

One Uses Only Water To Put Out Oil Fires

Some new fire-fighting inventions were described by Commander A. N. F. Firebrace, divisional officer of the London Fire Brigade, in a lecture before the Royal Society of Arts. One was a method of putting out oil fires with water only. Another was a Hungarian appliance which extinguishes small fires by pumping on to them bicarbonate of soda and carbon dioxide gas—the gas obtained by purifying and treating the exhaust gases of the internal combustion engine which propels the appliance. The system by which oil fires are put out with water alone has been evolved during the last year. It has received the approval of the Board of Trade for ship installations and has been tested in some instances on shore, but so far it has only had a chance to prove its worth under test conditions. Water sprays are so fitted that every space, concealed or otherwise, can be bombarded with spray under pressure. The bombardment of the surface of the oil breaks it up into a multitude of tiny globules, each surrounded by a thin film of water. This emulsion, as it is called by chemists, will not burn, since the flame only reaches the water film surrounding the oil globules. The surface of the liquid being thus nonflammable, the fire at once goes out.

Gasoline Tax Refunds

Will Be Subject To A One Cent Deduction In Saskatchewan

Gasoline tax refunds to Saskatchewan farmers operating power machinery will be subject to a one cent deduction to cover the cost of administration effective as from January 1. Announcement of the inauguration of this policy was made from the beginning of the current calendar year was made by Hon. A. C. Stewart, Minister of Highways.

The policy is in line with that operative in Manitoba, Alberta and British Columbia where deductions to cover administrative cost are made.

Death Penalty For Theft

Soviet Authorities Make Drastic Order To Stop Grain Stealing

North Caucasian authorities have ordered death penalties to prevent theft or diversion of seed grain loaned by the central government.

Death was made the penalty not only for the thieves themselves, but also for officials whose negligence made the thefts possible.

The Moscow press distributed grain thefts to sabotage by kulaks.

Umbrellas are to be supplied free of charge to patrons of a movie theatre in Madrid, Spain, in case of sudden rain.

An evening air service between London and Paris has just been inaugurated.

When Your Daughter Comes to Womanhood

Give Her Lydia E. Pinkham's Vegetable Compound

Most girls in their teens need a tonic and regulator. Give your daughter Lydia E. Pinkham's Vegetable Compound for the growth and guard her health at this critical time. When she is a happy, healthy wife and mother she will thank you.

Preparing For World Economic Conference

Representatives Of Sixty Nations Are Expected To Attend

Some 1500 delegates representing sixty nations are expected to attend the world economic conference in London, England, which is expected, the organizing committee will announce for June 12. This is the best news London's hotels and shops have had since the world slump. Various legations and embassies are already arranging receptions and dinners for the conference. The sessions will be held, approximately enough, in the London Geological Museum. Around a spacious hall 100 feet long by 150 feet wide, supported by towering pillars, the London post office is now rigging up telephone and telegraph facilities, which it claims, makes London the "centre of the world" in the centre of the room is a titanic statue of Hercules to inspire the modern Alphas in their work.

New Type Of Banana

Trinidad Produces Fruit Immune To Panama Disease

The discovery of a new type of banana at Port of Spain is expected to make economic history in Trinidad. Thomas Potter, the secretary of the Agricultural Society, told an audience the banana was of the same family as the local Cayenne banana and was immune to "Panama disease," but was the same size and color as the Jamaican banana.

It promises to meet all requirements of the export trade and is described as the "banana of the future." A government committee recently recommended a grant of £2000 to develop banana exports from the colony. The Tropical College is now experimenting with the banana for export for sea transport of bananas.

Market Is Improving

Japan Is Buying More Of Canada's Raw Materials

Japan's market for Canadian raw materials is gradually improving, writes A. J. Langley, commercial secretary in Tokyo, in the Commercial Intelligence Journal. The wheat market is quite active, but owing to price considerations, it is not so active as it was. However, in such foodstuffs as cheese and macaroni, the Canadian share of the market is going up monthly, particularly in macaroni.

The Prairie Field Crop Acreage

Over two-thirds of the field crop acreage of Canada is concentrated in the three prairie provinces, and most of this area is used to the grain crops, with wheat predominant. Roughly speaking, the specialized wheat areas cover the southern short-grass plains from the Red River Valley of Manitoba to the foothills of Alberta, and also the greatest width in central Saskatchewan.

Seed From Peace River

Peace River seed corn, a championship wheat of the Peace River will be needed in Newfoundland this season. Made up half of Heward and half Marquis, a variety from the Peace River, Alberta, has been forwarded to the Empire's oldest dominion. Much of the shipment came from the farm of Herman Marquis at the town of Waplesburg, in central Saskatchewan.

Old Roman ruins at York, England, are being investigated to accommodate night visitors.

Should Be Investigated

Canada Might Develop Market In Japan For Coal

Japan recently placed an order for 200,000 metric tons of coal with various coal companies in Mexico. It is understood that this order is a sample one, and that the Japanese government will make tests to discover the fuel value of the Mexican product.

The news has created considerable interest in Canadian coal mining circles. Vast quantities of bituminous coal are available for export from this country. Its quality is good; and its accessibility, in many areas, is ready, that labor of mining involved should enable it to enter into world markets at moderate prices.

If Japan has a market of any size for the type of coal that Canada can supply, it is one that should be thoroughly investigated. Any opportunity of making important relations and giving an outlet for capital investments, is of special moment in these difficult times. Winnipeg Free Press.

Moderate Tariff Policy

U.S. Finds Extreme Isolation Greatest Danger To World Peace

President Roosevelt's secretary of state, Cordell Hull, told the American section of the International Chamber of Commerce, in an impassioned speech, that America must lead the world back to moderation in tariff policy, and asserted extreme isolation is "the greatest danger to world peace."

Pointing to the huge sums owed to the United States, the secretary asserted the country's policy since the war has ignored the fact that these obligations can be paid only in gold, services, or favorable trade balances. He referred to the administration's policy as one of "reasonable, moderate, decent" tariffs, not "no tariffs, nor even low tariffs."

Now You Tell One

Tennessee Man Had Big Weighing Ton and Half

"Big Bill," king of porkers, is dead. Herded by his owner, Walter Chappell of Martin, Tennessee, as the world's biggest hog, "Big Bill" tipped the scales at 2,500 pounds. Chappell planned to fatten him up to 3,000 pounds and take him to Chicago for the Century of Progress Exhibition.

"Big Bill" was willing, but a foreboding black storm of rain and hail, much poundage and caused paralytic Chappell, tears in his eyes, ordered the heavyweight Poland China boar chloroformed, and today a taxidermist here had been commissioned to make "Big Bill" a size of figure for future generations to marvel at.

The oldest ski in the world is in a museum in Stockholm, Sweden. It is believed to be 3,500 years old.

Has a hundred uses. Always has a box in the kitchen.

Appelcor paper requires no wax.

W. N. O. 1964

OPPOSITION BY GERMANY SHOWN AT ARMS PARLEY

Geneva, Switzerland.—Delegates of the "Big Five" nations to the world disarmament conference at a special session again failed to reach an agreement on vital issues and decided to leave the entire question to the steering committee, which will decide the fate of the conference.

The "Big Five," comprised of delegates of Great Britain, France, Italy, Germany and the United States, called the meeting in an attempt to get the conference back on the rails after a near-week through the continued refusal of Germany to cede from its position.

Count Rudolph Nudolini, German delegate, again refused, during informal discussions, to abandon Germany's position that the country can not accept some of the proposals in the German disarmament plan. Those referring to conscripted German youth rather than long-term groups, were particularly concerned.

The atmosphere was pessimistic. The leaders even clashed on the question of procedure to be followed, the count insisting the conference should discuss reduction of armaments before again considering the reduction of armed forces.

All the others present insisted on seeking the armed forces question first.

It is expected that the German position will be opposed by a majority of the steering committee.

The possibility also existed that the conference would vote to continue its efforts in respect of Germany's attitude, and even possibly make a convention without Germany.

Adding to the peril confronting the conference was the declaration of Foreign Minister Konstantin von Neurath of Germany that whatever reductions are achieved under the British plan, "Germany will be compelled to supplement her armaments and increase her arms."

Neurath von Neurath in the statement in the Journal of the German League of Nations Union, asserted that in his judgment there is no hope for prohibition of air armaments or bombing aircraft.

"That means," he wrote, "that Germany must for her own security develop offensive and neutral aviation, and offensive and defensive aircraft, which others need, Germany needs also."

He said the British plan, recently presented by Prime Minister Ramsay MacDonald, failed to grant Germany sufficient recognition as far as arms equality is concerned.

Russia To Sell Railway

Annuance Intention Of Selling the Chinese Eastern Road
Moscow, Russia.—Russia told the Chinese Nationalist Government that China had no right to the Chinese Eastern Railway in Manchuria and announced its intention of selling the line to the new state of Manchukuo.
Advancing the Nationalist Government's policy of the Peiping-Mukden treaty of 1924, governing the joint operation of the Chinese Eastern by Soviet Russia and China, was considered vital. Foreign Commissar Maxim Litvinov revealed the decision to sell the line to keep peace in the Far East.

Asks For Arms Concessions

President Roosevelt Seeking For Conciliatory Attitude From Germany

Washington.—President Roosevelt is seeking to bring Germany to a conciliatory attitude which will make possible definite accomplishments at the Geneva disarmament conference.

The American attitude is that the various nations represented at the Geneva disarmament conference should show a willingness to make "reasonable concessions to achieve an agreement and that talk of treaty reservations should await a more opportune time."

Extend Agreement

Ottawa, Ont.—Without debate the House of Commons passed a bill empowering the governor-in-council to extend indefinitely, by proclamation, the trade agreement in existence between Canada and New Zealand since May 24, 1932. The treaty expires May 14, 1933.

Activity In Alberta Oil Fields

Calgary, Alberta.—Calgary oil men predicted great activity in Turner-Vale oil fields this summer now that the Alberta government has removed drilling restrictions and permitted a greater flow of gas, which will result in a larger naphtha production.

Condemn H.B. Route

Senators Urge Curtailment Of Expenditures On Port

Ottawa, Ont.—Senator Patrick Burns of Calgary added his voice to that of Hon. J. P. B. Cagrain, of Montreal in condemning the Hudson Bay Railway. Speaking on Senator Cagrain's motion urging curtailment of government expenditures on the development of the port of Churchill, Senator Burns said the people of the west had talked for 50 years before they got the Hudson Bay Railway and would have been wiser if they had talked for 50 years more.

Senator Burns, a veteran cattlemen and an Alberta pioneer, said he had been to Churchill and was not impressed with its possibilities. The harbor was good but the land along the railway was not fertile. Settlers would be foolish to go there when there was plenty of good land available.

From Winnipeg to the Rockies the western plains were becoming a cattle-feeding country. Senator Burns went on. Shipments of cattle began in February and ended about July. The Hudson Bay route would not be available for this trade, because wintering of cattle would be impossible. Churchill could not expect to participate to a great extent in the growing cattle export to the United Kingdom. There was practically no line along the railway and the only hope lay in the discovery of important oil.

Two large mines had already been developed in the area, said Senator Leask. He said Senator Cagrain was coming to the decision to lay route. He criticized Senator Cagrain for his repeated adverse comments and affirmed his faith in the enterprise.

In closing the debate Senator Cagrain urged the government to spend no more money on Churchill, Navagaw and Hudson Bay. He was dangerous, he said, and Churchill harbor was subject to ice blockades.

May Drop Shipping Bill

Strong Opposition To Be Offered Would Provoke Session

Ottawa, Ont.—The senate banking and commerce committee adopted, last week, a bill to amend the coasting laws. Their effect is identical with the previous drafts.

Under the new amendment transshipment of grain at Buffalo is prohibited unless it is carried from the head of the lake to Buffalo. Under the bill, the lake to Buffalo route is prohibited. Both parties are preparing to offer strong opposition and it is believed that the ministry will drop the measure rather than prolong the session.

Manitoba Emergency Tax

City Of Winnipeg Refuses To Deduct Two Per Cent. Levy From Employees

Winnipeg, Man.—Expressing surprise at the action of city council in refusing to deduct the two per cent. emergency tax levy from city employees, Mayor J. G. Green said that John Bracken said the tax was constitutional and would be enforced.

At a meeting of city council a motion was passed instructing the city treasurer not to make the deduction from salaries of city employees. It also expressed its intention of carrying the fight to the courts, should that be necessary.

New British Air Chief

Sir Edward Ellington Succeeds Late Sir Geoffrey Salmond

London, Eng.—Air Marshal Sir Edward Leonard Ellington has been appointed chief of the air staff in succession to Sir William Geoffrey Salmond, who died April 27.

Since 1931, Sir Edward Ellington had been air member for personnel on the air council and for three years before that was air officer commanding-in-chief of the air defence of Britain.

Appointed Registrar

Winnipeg, Man.—Bolt nominee for election as chancellor of the University of Manitoba and representative of graduates on the board of governors, the Right Rev. J. Matheson, for many years chancellor under appointment by the lieutenant-governor-in-council, has been declared elected by the registrar.

Throws Stone At Prince

Manchester, Eng.—A large stone was thrown at Prince George of Wales as he was on his way in an automobile to the Manchester airport. The stone was thrown by a boy, and it hit one of the mudguards with a crash. The prince saw it coming and dodged it.

War In South America

Trouble Between Paraguay and Bolivia Causes Concern In United States

Washington.—Word that Paraguay had declared war on Bolivia caused deep concern in American official circles, where it was immediately pointed out that Paraguay is a party to the Kellogg-Briand peace pact renouncing war as an instrument of national policy.

Bolivia, on the other hand, is not a party to the famous anti-war treaty, under which most of the nations of the world agreed to settle their disputes by peaceful means.

At the state department, where efforts have long been made under Francis Willis to settle the Paraguay-Bolivia dispute over the Chaco territory, considerable anxiety was evident, although no immediate statement was forthcoming.

Thousands Of Books Burned

Germany Is Purging Her Libraries Of Un-German Influence

Berlin, Germany.—Back 100,000 books from private as well as public libraries were piled high on "Kultur's" altars, being burned by Germany for public burning.

Schoolboys enthusiastically rushed into preparations for the huge fires for which they were responsible. Nazi student committees of action were working at top speed for more than a week arranging for the great purging of the libraries of "un-German influences."

All books of a Socialistic, Jewish or Jewish origin were especially marked for destruction.

SPRING WHEAT ACREAGES CUT IN CANADA AND U.S.

In addition, there was a dumping duty—the difference between \$4.40 and the average exchange value of the pound, irrespective of the exchange value.

When gold was abandoned in the United Kingdom, explained Revenue Minister E. H. Rydenham, Canada continued to collect duties on the par value of the pound, irrespective of the exchange value.

In addition, there was a dumping duty—the difference between \$4.40 and the average exchange value of the pound, irrespective of the exchange value. This exchange value was set every 15 days by the department and it was concerning this valuation that legal difficulties arose.

Met Tragic End
Dr. M. Strath, Saskatchewan M.L.A., Is Found Dead
Saskatoon, Sask.—His throat cut with a razor, Dr. M. Strath, Liberal member for Hargreaves constituency in the Saskatchewan legislature, was found dead.

The body was discovered by his wife, slumped over the steps of a caboose on his farm near here. Dr. Strath, who was 50 years old on May 1 last, had been suffering from a nervous ailment for the last month and was intending to leave to visit his brother, Jas. Strath, at Olds, Alberta.

Conference Must Not Fail
Toronto, Ont.—Prephering dire results should the economic conference in London next month, Sir Walter Layton, C.B.E., editor of the Canadian Economist, addressing the Canadian Club, said the difficulties before the conference were tremendous, but that the penalties of failure are so great "none of us can afford to let the conference fail."

ITALIAN MINISTER WELCOMED AT NEW YORK

Benito Mussolini Arrives In City

Washington, D.C.—Benito Mussolini, Italian premier, arrived in New York for several hours. Guido Jago, Italian Finance minister, who arrived to confer with President Roosevelt on international affairs, was consoling for the delay by the warmth of the welcome he received when he arrived in New York. Here is the distinguished visitor acknowledging the welcoming ovation with the traditional Fascist salute.

Since 1931, Sir Edward Ellington had been air member for personnel on the air council and for three years before that was air officer commanding-in-chief of the air defence of Britain.

Both her maternal and paternal grandfathers are multi-millionaire industrialists.

Dumping Duty Valuations

Bill Passed Granting Necessary Power Concerning Legality

Ottawa, Ont.—Because there had been doubt raised concerning the legality of the arbitrary dumping duty valuations set by the department of national revenue, the House of Commons passed a bill granting the necessary power.

When gold was abandoned in the United Kingdom, explained Revenue Minister E. H. Rydenham, Canada continued to collect duties on the par value of the pound, irrespective of the exchange value.

In addition, there was a dumping duty—the difference between \$4.40 and the average exchange value of the pound, irrespective of the exchange value. This exchange value was set every 15 days by the department and it was concerning this valuation that legal difficulties arose.

Revised Postage Rate On Newspapers Approved

Bill Sponsored By Premier Bennett Also Covers Periodicals

Ottawa, Ont.—The new postage rates for newspapers and periodicals carried 40 miles and farther, were approved by the House of Commons in a bill sponsored by Prime Minister R. B. Bennett.

The bill provides that where the delivery place in the publication is 50 per cent. of the total, or more, the postage rate shall be four cents a pound when carried more than 40 miles. The present rate is 1 1/2 cents.

Mr. Bennett said the original proposal had been to increase the rates gradually where the advertising space was less than 50 per cent. but greater than 20 per cent. Representatives from the publishers, however, had convinced the government this would be an undue hardship. It was established, the Prime Minister said, that under existing conditions, even if the postage did not break even, unless its advertising space was approximately 50 per cent. of the whole.

End Direct Relief

Direct Relief In Saskatchewan Areas To Cease In Two Months

Regina, Sask.—Direct relief in rural Saskatchewan will come to a close within the next two months. Similar assistance to relief applicants in Regina may also be cut off about the same time.

A work camp, it is unofficially stated, will be opened under provincial government control, at Dundurn where the military training camp is located, and the Prince Albert National Park will remain open, the two camps giving accommodation to about 300 men.

The Saskatchewan Relief Commission, functioning in rural areas of the province, will close down as a district organization by the end of July. Regina city officials stated they are expecting that by the end of July the city will either have to bear the entire cost of direct relief or close down altogether.

RADIO QUESTION IS SHELVED UNTIL NEXT SESSION

Ottawa, Ont.—The whole set-up of public control of radio broadcasting in Canada will be investigated by a parliamentary committee next session. This was announced in the House of Commons by Premier R. B. Bennett in the midst of a prolonged attack on the personnel and record of the Canadian radio broadcasting commission by Liberals and Laborites.

The commission, established less than a year ago to administer public control of the air, was termed the most unpopular organization in Canada. The claim was made it had lost the confidence of the general public. It was criticized for its re-formation of the air channels leading to the blacklisting of stations and regulations. Its programs were criticized and, above all, it was described as a "Conservative-owned and Conservative-operated affair."

Sensing the decided change from a year ago when parliament unanimously established public control of the air, the Prime Minister said: "It is my most earnest desire the radio business should come back to the position where, as one of the British speakers, we spoke our determination to maintain this as a national undertaking. I therefore, suggest it, we call to mind being at the next session a committee to which this whole matter will be referred in order that the House should speak for the whole nation and not for any party with respect to a matter of this kind."

The Prime Minister made a plea for a "fair chance" for the radio commission. It had been in office only a

Value Of Canadian Salmon

Recent research has indicated that salmon oil is similar to potency medicinal fish oils in vitamin A content and since the oil is mixed through the flesh of the fish persons using salmon on the table will obtain from it the vitamin supply necessary for good health. So far salmon is the named form is concerned, the research has apparently not shown it to be very high in Vitamin "A" content, but rich in Vitamin "D." Certain fish liver oils, such as cod liver oil and halibut liver oil, of course, are also very rich in vitamins and hence their medicinal value.

Different Motives For Song

Birds Do Not Always Warble For Sheer Joy

The popular idea, no doubt fostered by poets, that when the singing birds pour forth its "strains of unprompted art" it does so out of sheer joy of life, is not believed by close observers of bird life, according to a Manchester expert. He says bird songs may express many emotions. He has heard a blue-it that was being chased by a hawk scold with fright and burst into song at intervals.

Blackbirds fighting will scold and chatter all the time and occasionally break into song.

B.C. Indians No Longer Reckon Wealth in Dogs and Ponies

Having now given up the age-old belief, their wealth and position in the world is indicated by the number of dogs and ponies they possess, aborigines of British Columbia have pronounced socialist authorities in ridding the interior of the fur-trappers, according to Rev. W. R. Lett, of a George's Indian school at Lytton, he said.

Because Indians reckoned their wealth in ponies and dogs, there is today a surplus of the animals in interior British Columbia, Mr. Lett stated. They are destroying sheep and poultry, and are of no value. Fortunately the modern Indian sees this, and is being taught to raise the crops and the ranges of wild heres, he said.

The Fountain Of Youth

No One Needs Anything Better Than "Quality of Imagination"

For the bright lexicon of youth, Professor Nash of New York University has a better definition of "quality of imagination." It is measured by the "quality of imagination." One may live to 90 and yet die young. To be sure, "organic youth" ends at about the "coming of age." But the "quality of imagination" may be extended far into maturity. "The quality of imagination," says Nash, "is the quality of imagination." Thordike has been telling us that we are never too old to learn. Eagerness for adventure, for new experiences is an indication that age has not yet taken command of the mind. If one has within him a sufficient quantity of imagination, he need not look outside of himself for the fountain of youth.—New York Times.

A Good Eye Exercise

Newspaper Reading Also Provides For Individual Sight Test

Newspaper reading is excellent exercise for the eyes, Harry L. Foug of Los Angeles told the Missouri Optometric Association at its annual convention in Kansas City.

Newspapers, Foug added, also provide for an individual to test his own eyes. Hold the paper in a good light, he said, about 16 inches from the eyes. If you can read it easily, your eyes are all right.

To make the test still more conclusive, move the paper quickly to about nine inches from the eyes. If you can still read it, there's absolutely nothing wrong with your vision.

Baron Wilhelm Elder von Schoen, German ambassador in Paris at the time of the declaration of the great war, died from heart disease at the age of 87.

The consumption of butter in Canada amounts to about 30 pounds per head per annum.

Ideal Range For Chicks

Place Where Succulent Green Feed and Shade Are Available

An ideal range for chicks is a clover field beside a corn field, or an orchard, where they can get all the succulent green feed they can eat and still have shade as required. Given those conditions, once the chicks go upon range they can be reared with very little labor, dependence being placed mainly on hopper feeding. Plans for a satisfactory range hopper and other constructions for poultry have been evolved by the Dominion Department of Agriculture.

A Sharing Of Troubles

Harmony Between Employer and Employee During Difficult Times

One of the finest things that has developed during this period of depression has been the spirit of responsibility and sacrifice jointly shared by the employers and the employees.

The employer has seen profits vanish and losses increase and the matter of dividends become a memory.

The employee has had short time and in some cases reduced hour rates. But with all this there has been no friction and no animosity.

The employee knows more of his employer's difficulties than he did previously. He has known by his own sight and reason that reductions were not put into effect except as a last resort, and records will show that the employer would have been much better off had he made those reductions a year or more earlier than he did.

This harmony between employer and employee has been one of the few bright spots that has prevailed in the dismal condition of affairs of the past two or three years.—Graphic Arts Bulletin.

The Benefit Of Laughter

There is, apparently, a standing alternative between annoyance and amusement over life's ironical accidents and he who lives best is he who derives the most relief from the tears and tension of his own trials. It is a child's privilege to laugh because he is tickled, but the adult must learn to laugh in the face of misfortune, hardship, even pain or he becomes the unhappy laughing stock of his associates. Such laughter it seems, has a definite therapeutic value. It has long been said that one may laugh his way out of nervous prostration. Miss Mary F. Ferguson, supervisor of social service at Johns Hopkins Hospital, says, "I have known laughter as an antidote for all sorts of neuroses and even for social disorders."

Moscow Stages Demonstration

Russia's Military Power Passed In Review Before Million People

On May 24, in Moscow, 100,000 persons swarmed through the famous Red Square, saw a demonstration of the Russian military power. According to May Day in Moscow Press correspondent, between 35,000 and 50,000 troops of the Moscow garrison passed in review, with them armored cars, artillery, anti-aircraft guns, tanks, about twenty huge tanks, painted a battleship colors, and carrying three-inch guns in their turrets. It revealed the latest in military equipment, while 350 airplanes overhead told of Soviet power in the air.

From the marketplace Utopia. Some of our own plain people, who, in vista, railing against militarism in America, and never tiring of lauding the Soviets, might ponder this Moscow spectacle. They might reflect, if

too, that this huge Red military machine is paid for by people who have

Soviet Russia today is not merely one of the world's greatest military powers. It is one of the world's greatest military dictatorships.

Robber Bees Active

Will Overpower Weak Colonies and Carry Honey Away

Although honey stealing is likely to be most troublesome in late summer, the bee-keeper has to keep in mind that robber bees may start their rackets at any time. In warm weather, when there is little or no honey to be got from the flowers, the bees will easily yield to any temptation to obtain it anyhow. After more or less fighting they will overpower any very weak colonies, and carry the honey to their own hives. Old robber bees have a shiny appearance, the hair having become worn off with entering so many different hives. Robber colonies should be allowed to grow weak, says the Dominion Apiarist, and no honey or syrup should be exposed in the apiary.

Loss Written Off

That pension was paid in error to a woman for 48 years has just been disclosed in London by the British post office department. The woman, an employee, retired in November, 1883, on account of ill health, but failed to disclose that she was married that year. Neither was it revealed until after her death in February, 1931. The loss has been written off.

The Library of Congress is the largest in the world.

Gardening Notes

Gardening Notes

By Gordon Lindsay Smith

Seedling flowers and vegetables in the hot bed or in flats in a sunny window are ready for transplanting. After the second set of leaves has developed these things should be thinned out so that they have at least two inches between them. The space between should be stirred a little and, of course, regularly watered. On warm days regulate by lifting the windows. If the weather turns cool, slowing the process in height and time as the season advances. When the plants are a couple of inches high it is well to thin them again. In the winter quarters where they should remain a couple of weeks, at least, before being put outside. Any space left in the beds may be filled with cabbages, cress, lettuce and other short seasons and crops and harvested directly from the beds.

Selection.—If the garden is a small one be satisfied with fewer varieties of flowers. It is much wiser to grow five plants each of ten varieties than twenty-five of one variety. A large mass of color to create an impression of spaciousness. In other words, grow a botanical museum of the ordinary.

Planting.—The bulk of the planting, one is well advised to select to such old favorites as *Hyacinthus*, *Delphinium*, *Hardy Perennial Aster*, *Broomrape Iris*, *Polemonis* and *Dianthus* in the perennial part and *Aster*, *Phlox Drummondii*, *Campanula*, *Petunias*, *Cornus*, *Nasturtiums*, *Impatiens*, etc., in the annual part. Reserve space for immediate returns. Avoid planting perennials that are unsightly when young. Give the space reserved for immediate returns a good willow for placing annually.

Window Boxes:—It is now time to think about the window boxes which can be set out after danger of frost is over. One must remember that a window box is simply a very intensive form of gardening, producing about ten times the amount of growth for the same area in the ordinary garden. On account of this it is essential that the soil in the box be very rich, containing plenty of fertilizer, and that it be kept damp by daily watering. As they are exposed to the sun and wind on nearly all sides artificial moisture is very rapid, hence artificial moisture every day is imperative.

Window boxes should be as long as the sill, about eight inches wide at the top, six at the bottom and at least seven inches deep. All inside measurements. Reinforce corners inside with iron straps and make sure the box is strongly attached to the window-frame. Itally should be painted green or brown, but may be painted to match the other wood work. Holes must be made in the bottom and also a thin layer of broken crockery or cinders to provide drainage. If possible, put in a layer of well-rotted manure before filling up with rich soil. Plant trailing vines such as nasturtiums and German ivy along the front and also edging material, with geraniums and larger plants at the ends. For more information on this subject, see *Practical Gardening*, a newspaper for a few days after this material is transplanted to BOX.

Shade-Loving Flowers: It often is considered quite a difficult problem to brighten up shady corners, particularly in these smaller gardens where all corners come in this category. But there is a shade of flowers that will flourish there, actually. These are the plants which prefer shade or semi-shade conditions. The tuberous rooted Begonias, for instance, will not do well unless they are grown in shady corners, such as under tree foliage. Among those flowers which are really shade loving are the following: Begonia Rex, Begonia Maculata, Begonia Fendleri, Philox, Nicotiana glauca, Maranta arundinacea, Phlox, Nemophila, Lupinus, Larkspur, Godetia, Clarkia, Alyssum and Candytuft. Practically all annuals will flourish in shade, but they will not bloom longer and also their depth of color if they have a little light shade, particularly around noon when the sun's rays are strongest.

World's Leading Newspaper

**Medal Of Honor Has Been Given To
London Times**

The London Times was cited as the "leading newspaper of the world," by President Walter Williams of the University of Missouri School of Journalism. A medal of honor for "distinguished service in journalism," was accepted on behalf of The Times by Sir Wilmot Lewis, its Washington correspondent.

He referred to the newspaper "impartiality, its leanings, its courage, and its incorruptible English honor."

French vermouths and fruit juices for wine making cannot be shipped to the United States yet, even though they contain no more than 3.2 percent alcohol.

Many Theories Advanced As To Why Sun Has Been Darkened Without Being Eclipsed By Moon

It is interesting to recall that the sun has sometimes been darkened without having been eclipsed by the moon, says a writer in *THE STAR*.

Ptolemy records that in the first year of the reign of Augustus the light of the sun became so faint that it could be looked at with the naked eye. Here, again, sunspots have been advanced as the cause, but it is extremely doubtful if they were, even in this instance, responsible for any interference with the light. Even the largest naked eye spots, it will be found, cause no dimness.

Still more mysterious was what the astronomer, Kepler, mentions as having occurred in 1547, namely, that the sun had for some time such a reddish light that the stars shone out at noon. The reddish light may possibly have been accounted for by the prevailing atmospheric conditions but the circumstances of the stars shining at midday is puzzling, in the absence of any mention of an eclipse.

Kepler thought that some dense cometary matter must have caused the redness, but when Halley's comet passed over the sun at its last return in 1910, nothing of it was visible on that body, nor was there the least fading of the light.

There have been in more modern times the sun-darkenings at periods when the sky was apparently quite clear. To all appearances, indeed, there was no reason why the sun should not have shone with undiminished splendor.

One can surmise, in regard to these cases, that a very fine volcanic dust may have been suspended at a great height in the atmosphere, as was after the terrible eruptions of 1783, and the world-shaking outbreak of the volcano in 1883. It is possible that the sun for long afterwards had more or less veiled aspect, whilst during the lunar eclipse of October, 1884, the moon partially disappeared from view. As that rule is a copy-righted work when totally immersed in the earth's shadow.

While not favoring the idea of the passage of dense swarms of meteors partially cutting off the sun's light, it is not impossible that some of these meteors might do something towards "darkening" the sun.

Be that as it may, one is loth to believe that any real change takes place in the sun itself, as it can be observed in many of the infinitely more distant suns—the stars.

Nor is it to be supposed that there is involved anything which can be observed in many of the infinitely more distant suns—the stars.

Nature, in short, which is supernatural.

Preparing For Honey Flow

Manitoba and Saskatchewan Order Package Bees From U.S.

Two beekeepers from the Steinbach district of Manitoba have made the long trip to Mayhew, Mississippi in a truck to secure packages of bees for themselves and neighbors. They are bringing back 300 packages or about 2,000,000 bees in time to stock up hives in Manitoba in preparation for the honey flow.

Last year the Saskatchewan Beekeepers' Association sold 1,700 packages, but this spring orders for more than 1,700 packages have been placed and the shipping season has hardly commenced. Package bees infinitely may double those of last year. Previously most orders received were for two or three packages, and few more than twenty-five. This year there is a surprising number of orders for twenty-five, fifty, seventy-five, and one hundred or more packages.

The Utility Of Garnet

Has Its Place In Assisting Farmers In Certain Districts

Should success crown the present experiments of the Dominion Department of Agriculture in combining the outstanding qualities of Farnham and Garnet wheat, says Mr. Newman, the Dominion Cerealist, it would be difficult to compute the value of such an accomplishment to Canada. Although Garnet is not considered quite the equal of Marquis from the point of quality, many farmers report that Garnet is enabling them to carry on where they might otherwise have had to give up. Garnet however, is not recommended for any district where either Marquis or Farnham thrives satisfactorily.

Air mail service across the Sahara desert is to be started shortly.

Shearing Without Shaves

Soviet Scientist Gets Remarkable Result From Experiment On Sheep

Sheep which need no shearing, and living on clover and dogs with fur dyed in geometrical patterns, are the results of eight years of experiments by a young Soviet scientist.

At present, Professor Illin, trailed a flock of 2,500 sheep with chemical Ten or twelve days later, says the State Agency, they shed their wool. It took between two and three weeks to remove all the wool from each sheep compared with an average of forty minutes for shearing. The artificial removal of the wool has already made it possible to obtain 12 per cent. more wool. The wool itself is some two-thirds of an inch longer than when shorn. Next year Professor Illin will be given 15,000 sheep for his experiments. Experiments for the stimulation of the growth of wool have been conducted along two lines by the use of chemicals. By use of infra-red and ultra-violet rays, rabbits are reported to have yielded nearly twice as much down and fur after treatment. The professor considers that the stimulation of sheep's wool can best be achieved by the combined use of chemicals and rays. Rabbits, cats and dogs, whose white fur is enhanced by colored sugar, parabens, triangles and stars, may be seen walking about in Professor Illin's laboratory. By his dying process he has turned white rabbits into black ones, and made sable and martens darker, thus considerably increasing their value.

What One Acre Produced

English School Teacher Had Remarkable Results From Small Allotment

A teacher in a school in the South of England had such an allotment of one acre. It was partly given over to growing fruit and vegetables and partly to the raising of ducks, chickens and rabbits. And this is what this remarkable woman achieved—1 1/2 tons of fruit from a private report, "the raised vegetables enough to feed fifty people for nine months of the year, made 1,000 lbs. of jams from the fruit in the enclosure, for the boys, ducks, chickens and rabbits, and took six dozen eggs to the hospital on Christmas Day, over and above what was needed for the school, over-seas Magazine.

Ancient Farm Implements

Some Old-Fashioned Tools Offered at Recent Fair Sale at Brigg, England

Some of the implements offered at a recent fair sale at Brigg, England, were over a hundred years old, and included old-fashioned chain-ploughs and single-furrowed turners, ploughs weighing over half a ton and having handles up to 10 feet in length, and some very old pole wagons, the wheel lands of which were still an inch thick.

Best Container For Cream

A well soldered, plain-bottomed tin can, about 8 inches in diameter and 20 inches deep has been found by dairy farmers to be the best kind of container for cream. It is easily cleaned and convenient to handle. If cream is held in earthenware crocks that have in any way become chilled, an undesirable flavor may be imparted to the butter—Dairy and Cold Storage Branch.

Rice stored in Japan on March 10 totalled 225,000,000 bushels, or 20,500,000 more, than on the same day in 1922.

Cattle Should Be Dehorned

Marketing Board Official Places Annual Loss Through Bruising At \$175,000

The beef cattle industry of Canada sustains an annual loss of at least \$175,000 through horn bruising, says Garnet H. Duncan, Ontario Marketing Board.

"Periods of depression," he continued, "reveal losses often overlooked in normal times. However, a study of the results of horn injury sheds light on a loss of alarming proportions."

"For example, of 17,000 cattle slaughtered in one abattoir recently 27 per cent. had horns. It is conservatively estimated that the loss against such bullock, from horn bruises alone, was twenty-five cents per head."

"Total annual slaughtering in inspected plants approximate 500,000 head, according to latest figures. In addition, some 150,000 head are slaughtered in uninspected plants. This makes a total of 700,000 head slaughtered in one year."

"Total loss of horn bruises, computed at 25 cents per head, would amount to \$175,000. Now this amount is equivalent to straightening the corner of a 5,000 head of cattle, the average price of beef cattle, during the past twelve months, being \$35 a head."

"Parasitic this subject still further, Mr. Duncan said: "Next into the picture comes loss sustained through injury in the herd. Feeders must be contented if early finish is desired. Loss due to disturbing elements, however, can be controlled to a very degree of accuracy. "There are many losses sustained by the producer which are beyond control, but loss by horn injury is one which is completely under control, and one which will prove most expensive if neglected."

"Cattle should be dehorned before the herd is turned out to grass. This will eliminate extra labor and avoid possible injury to the animal," says Mr. Duncan.

Considered a Delicacy

Dish Of Snake Flesh Much Appreciated by Chinese

Some confusion crept into a report which recorded the death at Canton of Dr. Cho-Hsin after attending a dinner where one of the dishes consisted of prepared snake flesh.

Writing from Canton, the doctor's son, Mr. Cho Shu-han, stated that it was revealed after three post-mortems by several eminent physicians that the cause of death was the bursting of an artery in the brain and not poisoning.

"It is true that before my father passed away he did partake of the snake dish," states Mr. Cho Shu-han. "Although snake is a delicacy which graces Chinese tables at a certain season of the year, and is widely partaken of in South China by natives and foreigners alike. I fear that many people may be led to misrepresent it as an indication of savagery."

"I can quite understand the British Public's feeling of horror at eating reptiles. Nevertheless, to certain Southern peoples the only thing not edible on two legs is a human being, and the only thing not edible on four legs is a table!"

Clover Is Not "Clover"

The word "clover," as generally used, includes red, crimson, sweet and Dutch clovers, alfalfa, and trefoil, but from a botanical point of view, alfalfa and sweet clover are not clovers in the true sense as they do not belong to the genus trifolium, the real clover plant.

Indians Are Confident Curse Of Forefathers On Fernie Has Caused Disasters It Has Suffered

Markets For Choice Lambs

Rack Lambs and Heavy Lambs Will Bring Low Prices

The markets will continue this year to pay more for ewe and wether lambs and lambs of suitable weights.

Even early in the season before buck lambs take on their most objectionable features they are of poorer quality than ewe and wether, being bonier and having slack backs or joints.

Therefore, like all lambs of poorer quality they will be culled out and bought at their value in the early part of the season, and after July 1933, two cents per pound more will be paid for ewe and wether than for buck lambs.

The markets will pay a cent a pound more for lambs of good quality up to 80 lbs. at the stockyards and cents, that for lambs from 90 to 110 lbs., and up to two cents per pound more for lambs over 110 lbs.

Farmers are urged to meet the simple requirements of the market in order to secure top prices.

Careful Drivers Wanted

Fewer Accidents Would Result In Lower Insurance Rates

The action of the Automobile Union of Canada in reducing rates and offering substantial bonuses to careful drivers, will meet with general approval. Consequently every driver possible should be encouraged.

Every driver, of course, should use the utmost care, not only for the sake of his own life and limbs, but for others and for the sake of his pocket. In claim for accidents could be reduced 50 per cent., and this is quite possible—think of the reduction the insurance companies would be able to make in their premium rates.

Soldiers Of Japan

Are Inured To Hardship And Have Little Reverence For Authority

The Japanese soldier has once more shown that he is a factor to be reckoned with in world affairs. It is difficult to compare him with his European confrere and, beyond the fundamental military virtues of fortitude, cheerfulness in adversity, and anxiety to discipline his own conduct and remembrance to the British "Tommy". Squat, bullet-headed, flat-faced and deep-chested, the Japanese presents the view from the majority of the recruits are drawn are inured to hardship from childhood. The native qualities of cheerfulness, simplicity and reverence for authority are fostered at the elementary schools at which all children are compulsory, and military training on the camp and the recruit readily receptive of the "moral training" which the Japanese fighting services lay such stress, and which is the foundation of their strength.

Valuable To Canada

If Experiments On Reward And Garnet Wheat Are Successful

Should success crown the present experiments of the Dominion Department of Agriculture in combining the outstanding qualities of Reward and Garnet wheat, says Mr. Newman, the Dominion Cerealist, it would be difficult to compute the value of such an accomplishment to Canada. Although Garnet is not considered quite the equal of Marquis from the point of quality, many farmers report that Garnet is enabling them to carry on where they might otherwise have had to give up. Garnet however, is not recommended for any district where either Marquis or Reward thrives satisfactorily.

Threatened Extinction of the City

Fernie, B.C., As a Business and Industrial Community, Is in Danger of Permanent Shutdown of the Great Cow's Nest coal mines occasions no surprise

among the Indians, as it could be said that the River country nearby. "It is the curse of our forefathers coming true," they say.

There is the story, partly legend, of Fernie's beginning and, according to the Indians, the explanation why Fernie has suffered such a succession of disasters during its comparatively brief history. The latest calamity, closing of the mines is believed to be innumerable. The coal mines which in their day have yielded millions of dollars' worth of black treasure, are now a desolate landscape, and the livelihood of hundreds of families will cease.

The legend of the curse on Fernie goes back to the days when the white man had only a vague suspicion that coal was to be found in that district.

A young member of the tribe, an expedition camped with a tribe of the Indians related the invasion of Indians in the Elk River Valley. Although the Indians resisted the invasion of the white men and gave them no encouragement to settle, this young man made friends with the natives and especially with a young Indian woman, daughter of the tribal chief. He noticed that the princess was a reckless and headstrong beauty and his curiosity was immediately aroused. The first inquiries went to the chief, because the Indians are very much attached to their customs and especially with a young Indian woman, daughter of the tribal chief. He noticed that the princess was a reckless and headstrong beauty and his curiosity was immediately aroused. CHAPTER X—Continued

"That probably means I went southwest," Alan remarked, and his short laugh was not pleasant. "You be natural and easy-like, but it won't get by with us. We've nailed too many larks in our time. I want to know who this party of yours is, where they came from, how they got into this country, how they know their way about in it. I want to know how that pack of water-pipes got into the 'Midnight Sun' store shed. I want to know the man who killed Jimmy Montgomery there on the 'Midnight Sun' now get busy."

He clicked the safety on his automatic and brought his elbow up against his side. Clink Woolley trembled, his knees shook, he wilted. He guessed that this man must be the Baker fellow, the sergeant terrible, whom Mett Anderson always mentioned in lowered voice. Those hypnotic gray eyes seemed to be boring through him. That heavy automatic was tilted, making his neck the last. And if he turned king's evidence, he might escape the noose.

It was a strange story that Alan and Bill listened to, there on the island in the heart of Many Waters. Eighteen months ago, on a whaler in Beaufort sea, the five whites, excluding the half-breed Andre, whom they picked up later, had "run a buck" under Jensen's instigation, but were overpowered by the captain and rest of the crew. Plunged ashore with the skipper's sulphurous good wishes at bleak Demarcation Point on the Arctic coast, they made their way across the Remanoff's to the new placer fields in the Kayukuk headwaters. They came too late to get worthwhile claims, and they discovered that "hawking" in the perpetually-frozen subsoil was even harder work than whaling.

It was Jensen, brooding over their predicament, who conceived the idea that it was easier to find gold which already had been found than to thaw a hole thirty feet down to black ash and bedrock and then maybe get something. It was Jensen who allayed their fears and dangled the golden rods in front of their eyes till their mouths watered and they were ready for anything he planned.

Andre the half-breed was a find. He fitted into the party like a key into

END PAIN—Soothe

a lock. They were crassly ignorant of the country; they were tyros when it came to travelling, hiding, living in the bush. But Andre the "breed" was bush-wise as a weasel and water-wise as a muskrat king, and he knew the whole north country from toes to come to Point Barrow as he knew the palm of his hand.

It was Andre who had brought the party into this strange country, by back rivers and untraversed trails, avoiding all sight of men, so that they seemed to have dropped from the sky. It was Andre who suggested the place of attack on the "Midnight Sun," and the "Tah-Azax" as a place to hide in after the swoop and robbery.

It was "breed" Andre's sharp-speaking Savage that drilled Jimmy Montgomery through the heart. . . .

Alan Baker breathed a little harshly. He ordered, "Describe that 'breed'!" And he added, "So there will be no mistake when I meet him."

Woolley described his attack confidently. Alan nodded curtly. After a few moments' silence, he spoke again: "Now about Trader MacMillan. How did that pack of furs get in his shed?"

"Jensen put it there," "Why?"

They did not know all the details, but from hints Jensen had dropped he was able to piece the story together pretty well.

Several years ago at Hershel Island, that gathering place for whalers, Indians, traders, Eskimos and Arctic explorers, Jensen had run afoul of Dave MacMillan. He had come ashore from a whaler, hungry for drink and hungry for woman's company, and after eight months of following the herds. He had found the drink, and in a whisky haze had started to make rough love to fifteen-year-old Jenny MacMillan.

Dave MacMillan fell upon him. For years now Jensen had been nursing his spite of him, and when he saw MacMillan's hard fist had caught him; and his ears still rang with the derisive jeers of those who saw him dog-whip Jensen across the beach, and over the shingle to the whaler.

He had never forgotten the MacMillan girl nor the incident of that snowy October day. The incident had smoldered in his vengeful soul; and when his party passed the trading post, it had fared out. It was a neat stroke, putting that comparatively worthless bale of furs in the shed of the man who had dog-whipped him. He had counted on the trader discovering them, wondering about them, and then, as the trader came to the police to them, and getting into hot water when he failed to explain how they got there. . . .

The revelation of Dave MacMillan's complete innocence was no surprise to Alan but merely a proof that his and Jenny's instinctive belief had been correct. Now he could know that in buying out of service he had saved the reputation and possibly the very life of the man who had been the tyrant he could never have vindicated Dave. In his own way he had planned, and had fought through to the partial triumph.

Writing down the essential points of this confession, he forced Woolley to make his mark on a scrap of paper, with the words "Bill as witness."

He made a second copy for Bill, in case something happened to Bill or him. Then he demanded of Woolley: "You say those other men went hunting. When are you expecting them back?"

Woolley did not know. He seemed strangely hesitant. Fidgeting uneasily he would glance up at Alan and then away, as though he had something to tell but was afraid to tell it.

Alan saw his agitation. He demanded: "What're you stumbling over? Cooking up some lie?"

"You'll not kill me if I try telling you the truth. . . . You'll not kill me if I try telling you the truth—where they went? You may can get back the dog of Alooska in time to save de girl."

"On the Alooska—in time to save the girl?" Alan jerked as though he had been struck by a thunderbolt. His face went suddenly pale. "You mean Joyce MacMillan? What about her? Tell it, or by G—d I'll choke it like you or you Open up. What about her? What do you mean—in time to save her? I'll not kill you if you tell."

Woolley stammered: "They went down de Alooska to get her. It's Jensen's idea. He's aimin' to take her along on de escape and keep her for himself. He's all turned out de girl."

His shaky little trailed off. He shrank back in quivering dread from the suggestion that had come from Baker's eyes.

For a little while, a few moments only, Alan stared, unseeing, out across the waters of the great blue lake. To wait there, until the bandits came back? Not that; they'd be three days and nights on the return trip. Joyce would be helpless all

down, examining the broken twigs, the wilted leaves, the crushed needles. He read that all this had happened three hours ago and that the criminals were thirty or forty miles up the spruce-buried Alooska, with Joyce their prisoner.

(To Be Continued.)

Work Savors of Magic

English Potter Makes Flower Pot By Hand In Twenty Seconds

Today in modern England you can see potters working in the same way as they did in the times of the Bible. The reason is that every garden flower pot is moulded by hand in a wheel practically identical in design with that used in biblical times. There's no need for machinery, for the potter can make a pot in twenty seconds.

One large pottery is in Sussex, a county famous for its clay. The clay lies in layers. The top layer is used for bricks; next comes the yellow "tile" clay, and finally the good red pottery clay—strongest of all—which is made into flower pots. The clay is first dumped into tanks of water, where it lies for a week. Then it goes to the mill and is finely ground. From the mill it is put in half-hundred weight buckets to the room where the "pot spinners"—as they are called—sit at their wheels.

First, the spinner sits at his lump of clay—1½ lbs. goes to a 5-inch pot—and piles them up beside his wheel. The wheel which is horizontal, rests in a shallow sink, half-full of warm water. The spinner seizes a lump of clay, puts it in the water, slides it down on the wheel and covers it with his two hands. At the same time he works the wheel with his foot. In a few seconds up rises a dummy pot. A few seconds more, moulded by the spinner's hands, it has risen to its full height, complete with rim. The whole business savors of magic.

Promptly the spinner slips a piece of string beneath the finished pot and whips it from the wheel. It gives in his hand as though made of cotton. In less than twenty seconds it makes a five-inch pot.

THE RHYMING OPTIMIST
By Alan Macmillan

FLYING DAYS
The days are short; almost we see them fly.
Blue wings of morn and purple wings of eve;
And who would watch the hours passing by.
Can scarcely believe them before they leave.

We would not seek to stay the moving tide
Or ordered marching of the stars
Through space,
Why, then, must we be still dissatisfied?
That time goes ever at a breathless pace?

In all the universe there is no pause,
Change follows change on never-resting wheels.
And he who seeks to read the comic laws
Must find his motion till his tired mind reels.
The days are short; why should we chafe
To know he is at last Exhausted?
Night's velvet wings or morn's bright wings of gold?

Must Disclose Transactions

Demand For Full Information From Brokers Is Legal

Brokers and financial institutions will be required to make a disclosure of all bond transactions of either purchase or sale, switches or changes from taxable to non-taxable issues or otherwise, that have been effected since the budget came down, under the department of national revenue.

It was her only way of telling us that something was wrong, she said to write this note as she dictated it, and she tricked them."

"It's so, it's so," Buzard agreed. "She tricked them under their very eyes, and counted on you to do it."

From room to room—Joyce's room, her father's, the kitchen, the trailing hall, the ground outside—Alan went carefully, noting signs, reading the story of what had happened.

Nothing about the post was disturbed. There were no signs of a struggle or fight. Joyce's light rug still hung on a peg in her room. His barrel inside was clean and shiny; the weapon had not been fired. Joyce must have been surprised and taken power without a chance to fight back.

At the clearing edge Alan found a (range) of the pot is a thickset where two men had lain and watched. Kneeling

Little Helps For This Week

"Whatever they had fished to do it with they night." Ecclesiastes 9:10.

"For even the Son of Man cannot be ministered unto, but to minister." Mark 9:35.

Set on thy shining lips, shall make thee glad;
A poor fellow observed by thee shall make thee rich;
Thou shalt be served by thee shall make thee strong;
Thou shalt be served by thee shall make thee strong.

A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace.—W. Emerson.

Be diligent after they power to do deeds of love. Think nothing too little, nothing too low, to do lovingly for the sake of God. Visit, if you mayest, the sick, relieve the poor; be generous and true one way or another; and He whom thou lovest, to whom thou ministerest, will own thy love and will pour his own love into thee.—E. B. Pusey.

Canadian Standard Measures

Though frequently used in Canada, there are certain standards of weights and measures in vogue in some of the United States that are illegal in the Dominion.

Quart, and gallon, for instance, are 16.6 per cent. less in capacity than the Canadian (Imperial) legal standards.

Insects To Save Oak Tree

Parasites have been commissioned to save 60-year-old oak trees in St. Mary's churchyard in New Plymouth, N.Z. They have been attacked by a pest known as the oak sawfly. Scientists of Cawston Institute supplied the insects packed in a special container, which has been fastened to the trees, and the battle is on.

Cookery Parchment

brings better, easier, cheaper cooking. Cooks all sorts of food, full flavours of meats, fish and vegetables. Inexpensive. Each sheet can be used over and over. All dealers, or write direct to
